Profile Summary

Python Developer and GenAI Engineer skilled in FastAPI, LangChain, LangGraph, PydanticAI, and RAG pipelines. Built 3+ end-to-end Python-based AI systems and automated production workflows during internship, spanning multi-agent orchestration, computer-vision auditing, and LLM-driven automation. Strong foundation in data structures, algorithms, and scalable backend design.

Education

B.Tech, Computer Science (AI & ML) <i>Noida Institute of Engineering & Technology, Greater Noida — CGPA: 7.29</i>	2022 – 2026
Class XII (CBSE) <i>Dewan Public School, Hapur — 71%</i>	2021 – 2022

Internship

AI & Python Automation Engineer Intern — Sparkx Automations	Nov 2025 – Feb 2026
- Built Python ETL scripts (Pandas, NumPy) to automate manual data workflows, cutting reporting turnaround from 2 days to under an hour. - Built Python-based FastAPI endpoints to expose automation scripts, letting internal teams trigger backend tasks on demand. - Built a Python LangChain text classifier that auto-categorized incoming leads from unstructured emails, cutting manual sorting effort by roughly half. - Fixed 3 legacy Python scripts failing in production by adding error handling and modular structure, improving pipeline reliability.	

Projects

AccessLens — AI-Powered Accessibility Audit Tool <i>Python, PyTorch, ViT, Hugging Face API, FastAPI, React</i>	Git Repo
- Built a Python-based web accessibility auditor combining WCAG 2.1 rule-based checks with a custom-trained Vision Transformer (ViT-B/16), catching visual accessibility issues that rule-based engines miss. - Built a Python FastAPI backend with Selenium-based page capture, Grad-CAM explainability, and automated PDF report generation backed by SQLite; containerized with Docker and deployed on Hugging Face Spaces.	
DentDost — AI Scheduling Agent <i>Python, FastAPI, PydanticAI, LangGraph, React.js, Vite</i>	Git Repo
- Built a Python PydanticAI multi-agent workflow with ReAct-style tool-calling that converts natural-language requests into confirmed Google Calendar bookings with schema-enforced outputs. - Built a Vite + React.js frontend consuming the Python FastAPI backend over streaming REST with a real-time conversational booking UI.	
AI Resume Analyzer — Client-Side ATS Scoring Tool <i>Python, LangChain, Ollama, React.js, Vite</i>	Git Repo
- Used Python LangChain to analyze ATS keyword density through a privacy-first local Ollama LLM; prompt optimization improved structured output accuracy by 35%. - Built a React.js SPA with drag-and-drop PDF upload and structured JSON result rendering — fully client-side with zero backend.	

Skills

Languages: Python, JavaScript, Java
Python & AI/ML: FastAPI, LangChain, LangGraph, PydanticAI, RAG Pipelines, Multi-Agent Orchestration, PyTorch
Frontend: React.js, Vite, REST/Streaming APIs, JWT Auth
Databases & Tools: MongoDB, MySQL, Pinecone, FAISS, Git, Docker

Achievements & Certifications

- Solved 400+ DSA problems on LeetCode, Codeforces, and HackerRank (arrays, trees, graphs, DP).
- 14+ certifications in GenAI, LLM development, RAG, and Frontend (React) from Coursera, DeepLearning.AI, and IBM.
- Top 10% in college coding competitions; active open-source contributor with pinned GenAI and React repos on GitHub.
