PROFILE SUMMARY

Full-Stack Developer & GenAI Engineer with hands-on experience building React.js/FastAPI applications and agentic AI systems using LangChain, LangGraph, and PydanticAI. Shipped 3+ end-to-end projects and an internship automating real workflows, spanning RAG pipelines, multi-agent orchestration, and computer-vision-based auditing tools.

EDUCATION

B.Tech, Computer Science (AI & ML) 2022 – 2026
Noida Institute of Engineering & Technology, Greater Noida – CGPA: 7.29

Class XII (CBSE) 2022
Dewan Public School, Hapur – 71%

INTERNSHIP

AI & Python Automation Engineer Intern – Sparkx Automations Nov 2025 – Feb 2026

- Built Python ETL scripts (Pandas, NumPy) to automate manual data workflows, cutting reporting turnaround from 2 days to under an hour.
- Built FastAPI endpoints to expose Python automation scripts, letting internal teams trigger backend tasks on demand instead of running them manually.
- Built a LangChain-based text classifier that auto-categorized incoming leads from unstructured emails, cutting manual sorting effort by roughly half.
- Fixed 3 legacy scripts that were failing in production by adding error handling and modular structure, improving pipeline reliability.

PROJECTS

AccessLens – AI-Powered Accessibility Audit Tool

React, FastAPI, Python, PyTorch, ViT, Hugging Face API | [Git Repo](#)

- Built a web accessibility auditor combining WCAG 2.1 rule-based checks with a custom-trained Vision Transformer (ViT-B/16), catching visual accessibility issues that rule-based engines miss.
- Built a FastAPI backend with Selenium-based page capture, Grad-CAM explainability, and automated PDF report generation backed by SQLite; containerized with Docker and deployed on Hugging Face Spaces.

DentDost – AI Scheduling Agent

React.js, Vite, FastAPI, PydanticAI, LangGraph | [Git Repo](#)

- Built a Vite + React.js frontend with a real-time conversational booking UI and custom session hooks, consuming a FastAPI backend over streaming REST.
- Built a PydanticAI multi-agent workflow with ReAct-style tool-calling that converts natural-language requests into confirmed Google Calendar bookings with schema-enforced outputs.

AI Resume Analyzer – Client-Side ATS Scoring Tool

React.js, Vite, LangChain, Ollama | [Git Repo](#)

- Built a React.js SPA with drag-and-drop PDF upload and structured JSON result rendering – fully client-side with zero backend.
- Used LangChain to analyze ATS keyword density through a privacy-first local Ollama LLM; prompt optimization improved structured output accuracy by 35%.

SKILLS

Languages: Python, JavaScript, Java

Frontend: React.js, Vite, REST/Streaming APIs, JWT Auth

Backend & AI/ML: FastAPI, LangChain, LangGraph, PydanticAI, RAG Pipelines, Multi-Agent Orchestration

Databases & Tools: MongoDB, MySQL, Pinecone, FAISS, Git, Docker

ACHIEVEMENTS & CERTIFICATIONS

- Solved 400+ DSA problems on LeetCode, Codeforces, and HackerRank (arrays, trees, graphs, DP).
- 14+ certifications in GenAI, LLM development, RAG, and Frontend (React) from Coursera, DeepLearning.AI, and IBM.
- Top 10% in college coding competitions; active open-source contributor with pinned GenAI and React repos on GitHub.
